INTERNATIONAL COMMISSION ON ZOOLOGICAL NOMENCLATURE

COMPOSITION AT THE TIME OF THE ADOPTION OF THE RULING GIVEN IN OPINION 326

A. The Officers of the Commission

Honorary Life President: Dr. Karl Jordan (British Museum (Natural History), Zoological Museum, Tring, Herts., England).

President: (Vacant).

Vice-President: Senhor Dr. Afranio do Amaral (Sao Paulo, Brazil).

Secretary: Mr. Francis Hemming (London, England).

B. The Members of the Commission

(arranged in order of precedence by reference to date of election or of most recent re-election, as prescribed by the International Congress of Zoology).

Senhor Dr. Afranio do Amaral (S. Paulo, Brazil) (Vice-President) (1st January 1944).

Professor J. R. Dymond (University of Toronto, Toronto, Canada) (1st January 1944).

Professor J. Chester Bradley (Cornell University, Ithaca, N.Y., U.S.A.) (28th March 1944).

Professor Harold E. Vokes (Johns Hopkins University, Baltimore, Maryland, U.S.A.) (23rd April 1944).

Dr. William Thomas Calman (Coulsdon, Surrey, England) (1st January 1947). Professor Béla Hankó (Békéscsaba, Hungary) (1st January 1947).

Dr. Norman R. Stoll (Rockefeller Institute for Medical Research, New York, N.Y., U.S.A.) (1st January 1947).

Professor H. Boschma (Rijksmuseum van Natuurlijke Historie, Leiden, The Netherlands) (1st January 1947).

Senor Dr. Angel Cabrera (Eva Peron, F.C.N.G.R., Argentina) (27th July 1948).

Mr. Francis HEMMING (London, England) (Secretary) (27th July 1948).

Dr. Joseph Pearson (Tasmanian Museum, Hobart, Tasmania, Australia) (27th July 1948).

Dr. Henning Lemche (Universitetets Zoologiske Museum, Copenhagen, Denmark) (27th July 1948).

Professor Teiso Esaki (Kyushu University, Fukuoka, Japan) (17th April 1950).

Professor Pierre Bonnet (Université de Toulouse, France) (9th June 1950).

Mr. Norman Denbigh RILEY (British Museum (Natural History), London) (9th June 1950).

Professor Tadeusz Jaczewski (Department of Systematic Zoology, Warsaw University, Warsaw, Poland) (15th June 1950).

Professor Robert Mertens (Natur-Museum u. Forschungs-Institut Senckenberg, Frankfurt a. M., Germany) (5th July 1950).

Professor Erich Martin Hering (Zoologisches Museum der Humboldt-Universität zu Berlin, Germany) (5th July 1950).

OPINION 326

VALIDATION, UNDER THE PLENARY POWERS, OF THE GENERIC NAME "HEXARTHRA" SCHMARDA, 1854 (CLASS ROTIFERA) AND MATTERS INCIDENTAL THERETO

- **RULING:** (1) Under the Plenary Powers, (a) the specific name *polyptera* Schmarda, 1854, as published in the combination *Hexarthra polyptera*, is hereby suppressed for the purposes of the Law of Priority but not for those of the Law of Homonymy; (b) the indication, by monotypy, of *Hexarthra polyptera* Schmarda, 1854, as the type species of *Hexarthra* Schmarda, 1854, is hereby set aside and the nominal species *Pedalion fennicum* Levander, 1892, is hereby designated as the type species of *Hexarthra* Schmarda, 1854.
- (2) The under-mentioned generic name is hereby placed on the *Official List of Generic Names in Zoology* as Name No. 793:—*Hexarthra* Schmarda, 1854 (gender: feminine) (type species, by designation, under the Plenary Powers, under (1)(b) above: *Pedalion fennicum* Levander, 1892).
- (3) The under-mentioned specific names are hereby placed on the *Official List of Specific Names in Zoology* as Name Nos. 228 to 230 respectively:—(a) *fennicum Levander*, 1892, as published in the combination *Pedalion*

fennicum (specific name of type species, by designation, under the Plenary Powers, under (1)(b) above, of Hexarthra Schmarda, 1854); (b) intermedia Wiszniewski, 1929, as published in the combination Pedalia intermedia; (c) mira Hudson, 1871, as published in the combination Pedalion mira.

- (4) The under-mentioned generic names or reputed generic names are hereby placed on the Official Index of Rejected and Invalid Generic Names in Zoology as Name Nos. 203 to 206 respectively:—(a) Pedalia Barrois, 1878 (a reputed but non-existent name); (b) Pedalion Swainson 1838 (a junior homonym of Pedalion Dillwyn, 1817); (c) Pedalion Hudson, 1871 (a junior homonym of Pedalion Dillwyn, 1817); (d) Pedalion Buckton, 1903 (a junior homonym of Pedalion Dillwyn, 1817).
- (5) The under-mentioned specific name is hereby placed on the *Official Index of Rejected and Invalid Specific Names in Zoology* as Name No. 107:—polyptera Schmarda,`1854, as published in the combination *Hexarthra polyptera*, as suppressed, under the Plenary Powers, under (1)(a) above.

I.—THE STATEMENT OF THE CASE

On 9th April 1948 Dr. G. M. Neal (*University of Toronto*, *Department of Zoology*, *Toronto*, *Canada*) submitted a preliminary communication on the subject of the name properly applicable to the genus of the Class Rotifera formerly known as *Pedalion* Hudson, 1871, or as *Pedalia* Barrois, 1878. For the reasons explained in paragraph 3 below this communication was later converted into a formal application to the Commission and was in addition revised in various respects. The application so revised

was submitted by Dr. Neal on 27th April 1951. It was as follows:—

Application for the stabilisation of the name for the genus of the Class Rotifera formerly known as "Pedalion" Hudson, 1871, or "Pedalia" Barrois, 1878, including a request for the use of the Plenary Powers to vary the type species of the genus "Hexarthra" Schmarda, 1854, and to suppress the trivial name "polyptera" Schmarda, 1854, published in combination with that generic name, and matters incidental thereto

By G. M. NEAL

(Department of Zoology, University of Toronto, Canada)

- 1. The object of the present application is to invite the International Commission on Zoological Nomenclature to use its Plenary Powers to stabilise the name for the genus of the Class Rotifera formerly known as *Pedalion* Hudson, 1871, or as *Pedalia* Barrois, 1878, by designating a recognisable species to be the type species of the genus *Hexarthra* Schmarda, 1854. The facts of this rather complicated case are set out in the following paragraphs.
- 2. The generic name *Pedalion* Hudson, 1871 (*Mon. microscop. J.* 6:121, pl. 94) was established for a monotypical genus for a new species then named *Pedalion mira*. The name *Pedalion* Hudson, 1871, is invalid, because it is a junior homonym both of *Pedalion* Dillwyn, 1817 (*Descr. Cat. Shells*: 282) and of *Pedalion* Swainson, 1838 (*Nat. Hist. Fishes* 1:199). It will be convenient if, before considering whether there is any subjectively identical nominal genus, the name of which should replace the invalid name *Pedalion* Hudson, 1871, we examine briefly the subsequent history of Hudson's name *Pedalion*.
- 3. In 1877 Barrois gave a paper at the Sixth Session of the "Association française pour l'Avancement des Sciences" held at Le Havre, entitled: "Sur l'anatomie et le developpement du Pedalia mira". This paper was published in 1878. Although, as noted above, the generic name was written in the form Pedalia in the title of Barrois' paper, that name appeared in the form Pedalia at every point at which it appeared in the body of that paper. Rousselet in 1914 (Association française pour l'Avancement des Sciences, 43e Session, Le Havre, C. R.: 535—536) drew attention to this inconsistency and raised the question whether it was due to an editorial error or whether it should be explained on the ground that Barrois was aware of the fact that the name Pedalion Hudson, 1871, was invalid and tried to get over this difficulty by substituting the variant form Pedalia in the title of his paper. It must be noted, however, that an abstract of this paper of Barrois' was published in the issue of the Revue scientifique

of 29th September 1877, and that in this paper only the spelling *Pedalion* occurs. In this abstract no title was given for this paper and it is possible that it is for this reason that the spelling *Pedalia* did not appear on this occasion, for (as noted above) it was only in the title of Barrois' paper that the spelling *Pedalia* was used. It may be noted incidentally at this point that the species dealt with by Barrois in the foregoing paper is not only not (as he supposed) the species which in 1871 Hudson had named *Pedalion mira*; it is not even referable to the same genus; it is actually a marine species of the genus *Synchaeta* Ehrenberg, [1832] (*Abh. preuss. Akad. Wiss.* 1831: 135).

- 4. Since 1913 the genus named *Pedalion* by Hudson has been called both by that name and by the reputed name *Pedalia* Barrois, 1878, the latter having even made its way into Neave's *Nomenclator zoologicus* (3:632), where it is quoted as a substitute name for *Pedalion* Hudson, 1871, the reference being given as "*Pedalia* Barrois, 1878, *C.R. Ass. Franc.* 6 (1877 Le Havre), 661".
- 5. I am bound to say that, in my view, it is impossible to accept, as a valid substitute name, a name (such as *Pedalia*) which appears only in the title of a paper, the correct spelling (in this case, *Pedalion*) occurring at every point in the body of the paper itself, where, if Barrois had intended to emend Hudson's name *Pedalion* in this way, he would certainly have used the spelling "*Pedalia*". It is clear, however, that no progress can be made in the stabilisation of the name of this important genus until this preliminary question has been disposed of. I accordingly ask the International Commission on Zoological Nomenclature to give a ruling that the use of the word *Pedalia* in the title (but not in the text) of Barrois' paper does not constitute the publication of a generic name consisting of this word, the spelling "Pedalia" being due, it must be concluded, to some inadvertence on the part of the editor of Barrois' paper or on that of the printer.
- 6. It is necessary now to consider whether there is any nominal genus possessing a valid name, the type species of which can be regarded as belonging to the genus *Pedalion* (or *Pedalia*) as hitherto understood. An examination of the literature shows that there is such a nominal genus, which does, or may, satisfy this condition. This is the genus *Hexarthra* Schmarda, 1854 (*Denskr. Acad. Wiss. Wien* (Mathnatur. K1.) 7 (No. 2): 15). This genus is monotypical, its sole species being *Hexarthra polyptera* Schmarda, 1854, a then newly described (:15) nominal species. This species is therefore the type species of the genus *Hexarthra* Schmarda by monotypy.
- 7. Our next step must be to consider the claims of the nominal species *Hexarthra polyptera* Schmarda to be regarded as representing a

species of *Pedalion* (or *Pedalia*). The specimen upon which Schmarda based his description and figures of this nominal species, which was hardly visible to the naked eye, was discovered by him in a pool at El Kab in Egypt. At first Schmarda mistook this animal for a crustacean larva, but the "Raderorgan" and jaws showed that it was a Rotifer. The jaws had seven teeth on each side. Schmarda's type specimen is missing, and the species which he described has not been reported by any subsequent worker.

- 8. In drawing up his description and preparing his figures of this species, Schmarda was severely handicapped by reason of the fact that he was working under field conditions and had no opportunity for studying the animal at leisure. This stand is taken also by Daday, 1903 (Mikroskopische Süsswassertiere aus Kleinasien. Wien. Sitzungsber. (Math.-Natur. Kl.) 112 (Abth. 1): 139—168). When after the publication of the name Pedalion, the view was advanced that the genus so named was indistinguishable taxonomically from the genus Hexarthra Schmarda, Hudson objected on the ground that Schmarda had described the six plumose appendages as originating from the ventral side, as in a nauplius larva, while in his genus Pedalion these appendages were arranged around the animal. Hudson admitted, however, the difficulty of studying the arrangement of the hairs on the appendages of Pedalion species, a difficulty which may be illustrated by the mistakes which he himself made in some of his own figures and descriptions.
- 9. Daday (1886, Morph. Physiolog. Beiträge zur Kenntniss der Hexarthra polyptera Schmarda. Termeszetraize Fuzetek 10: 214—249, pls. VIII, IX) believed that, in representing the appendages of Hexarthra polyptera as arising from the ventral side of the animal, Schmarda had been influenced by the apparant similarity between members of the genus Pedalion and the nauplius larva of Crustacea, a resemblance which, though apparent at first glance, is found on closer examination to be entirely superficial in character.
- 10. Levander (1894, Beitrage zur Kenntniss der *Pedalion* Arten mit einer Tafel. Soc. Faun. Flor. fenn. 11: 1—34, figs. 1, 2, 3) considered that, if one were to identify *Pedalion* with *Hexarthra*, it would be necessary to attribute to Schmarda a lack of observation which, in his view, there was no ground for assuming. Levander quoted the opinion of Plate—that, if Schmarda could show (as he did) the arrangement of the hairs on the appendages (which in *Pedalion* are found only on the ventral appendage) and the number of teeth in the jaws, he could not possibly have made the mistake of representing appendages as arising from the ventral side of the animal instead of being arranged in a circle around it. Plate concluded that, in view of these facts, the presence of hooks on appendages other than the ventral appendage, and the origin of the appendages from the ventral side of the animal, it was impossible to synonymise *Hexarthra* with *Pedalion*. As regards Plate's comment on these lateral hooks on the appendages, it is,

however, worth noting that Daday recorded the presence of similar hooks on the dorsal appendage in his figure of his *Pedalion mucronatum* Daday, 1909 (*Trav. Soc. Nat. Petersb.* 39:9—38, pl. 1, figs. 2—6), a nominal species which has been identified with *Pedalion oxyure* Sernov, 1903 (*Turkestanskago Otd. imp. russ. georgr. Obsch.* 4 (Pt. 3):9, pl. 1, figs. 2, 3), in the figures of which no lateral hooks are shown on the dorsal appendage. This difference between the illustrations given by Sernov and Daday, to which attention has not so far been drawn, has not prevented authors from accepting *Pedalion mucronatum* Daday and *Pedalion oxyure* Sernov as being no more than different names for a single species. I have never noted lateral hooks on any but the ventral appendage. Daday's (1909) representation of hooks on the dorsal appendage may be due to incorrect interpretation. (See below.)

- 11. Thus against the view that Hexarthra polyptera Schmarda is a species of the genus that Hudson named Pedalion is the observation by Schmarda that the appendages arise from the ventral surface and that there are lateral hooks on appendages other than the ventral appendage. As already noted, however, Daday himself showed incorrectly the presence of such hooks in his *P. mucronatum* (=*P.* oxyure Sernov). It must be noted also that at times the fold of the integument on the appendages can give a somewhat laddered appearance which under low magnifications may be mistaken for hooks. The presence of jaws in H. polyptera speaks for its being a rotifer. In view of the absence of posterior digitiform appendages (such as are found in *Pedalion mira* Hudson), Schmarda's species might well belong to the fennicum-group of the genus Pedalion. The arrangement of the hairs on the appendages is very similar to that found in a species of Pedalion which occurs in the Saskatchewan lakes of Canada. The principal objection to the acceptance of Schmarda's species as belonging to the genus *Pedalion* is therefore his statement that the appendages come from the ventral side of the animal. As regards this, it must be noted, however, that a similar appearance can be obtained by placing a specimen of an undoubted species of Pedalion under a cover slip, the weight of which has flattened the animal (Schmarda's figure seems to have been drawn from a flattened specimen); unless one constantly alters the focus while drawing the animal as a whole or one of its appendages in order to obtain the correct relation, it is very easy to arrive at the same conclusion as that reached by Schmarda. An inaccuracy of this kind on the part of Schmarda would not be surprising if we recall the difficulties with which he was faced, by reason of having to examine his material in the field instead of in a laboratory.
- 12. The next point which it is important to note is that Schmarda found his species *Hexarthra polyptera* in abundance in the waters which he examined. This fact suggests that that species, whatever it was, would have been found again by subsequent workers. The

species *Pedalion fennucum* Levander, 1892 (*Zool. Anz.* 15: 403) has, in fact, been reported from North Africa, where it appears to be rather widely distributed. Recent observations show that this species shows considerable variation in the arrangement of the hairs and some variation in the tooth formula—a fact which may account, in part, for some of the special features shown in Schmarda's figures. Further, Bryce in his paper on the Rotifera of Devil and Stump Lakes (1924, *J. Quekett microscop. Club* 15: 81—108) mentioned having examined a slide of *Pedalia* from El Kab (the type locality of Schmarda's species) that had been prepared by Rousselet. I have myself examined a slide of a specimen from this locality that was bought from Rousselet by the United States National Museum. The specimen mounted on this slide is a *Pedalion*.

- 13. The conclusion which I draw from an examination of Schmarda's (admittedly poor) description and figure is that the species which he described as *Hexarthra polyptera* belongs to Hudson's genus *Pedalion*. This conclusion becomes a virtual certainty, now that we have an actual specimen of a *Pedalion* from the very pond in which Schmarda took his *polyptera* but in spite of the abundance of that species noted by Schmarda no specimen of a species belonging to a separate genus recognisable from Schmarda's description as *Hexarthra* is known from that very restricted locality Schmarda's description of the arrangement of the hairs on the ventral appendages, the number of hooks on the ventral appendage that he noted, as also the number of teeth (seven) in each uncus, all place the animal described by Schmarda in the *fennicum*-group of the genus *Pedalion*.
- 14. In the light of the foregoing considerations, I reach the conclusion that the nominal genera Hexarthra Schmarda, 1854, and Pedalion Hudson, 1871, must, on taxonomic grounds, be regarded as subjectively identical with one another. Accordingly, the name which under the Code should be applied to this genus is Hexarthra Schmarda and, as it is the older of the two names, would still be the correct name for this genus, even if Pedalion Hudson, 1871, were not an invalid homonym. In view of the considerable discussion that has taken place in regard to this question and also of the importance and interest of this genus, I think that it is important that this subject should now be closed by the name Hexarthra Schmarda being placed on the Official List of Generic Names in Zoology and the invalid name Pedalion Hudson, 1871, on the Official Index of Rejected and Invalid Generic Names in Zoology, together with the reputed, but non-existent, name Pedalia Barrois, 1878. It would be useful also if all other invalid uses of the name Pedalion subsequent to the name Pedalion Dillwyn, 1817 (Class Pisces) were at the same time to be relegated to the Official Index.
- **15.** At this point we encounter a difficulty of quite a different order. The nominal species *Hexarthra polyptera* Schmarda, though incorrectly

and inadequately described, must be regarded as belonging to the highly variable group represented by *Pedalion fennicum* Levander, 1892. Accordingly, under the Code the trivial name polyptera Schmarda, 1854, being much older than fennicum Levander, would replace the latter name. The trivial name fennicum Levander is, however, so deeply entrenched in the literature that its replacement by the hitherto contentious name polyptera Schmarda would certainly give rise to confusion and would be open to strong objection. In order to prevent this confusion, I accordingly ask the International Commission on Zoological Nomenclature to use its Plenary Powers to suppress the trivial name polyptera Schmarda, thereby validating the later name fennicum Levander for the same species. As part of this proposal, I ask the International Commission to use the same powers to designate Pedalion fennicum Levander, 1892, to be the type species of Hexarthra Schmarda, in place of the older nominal species Hexarthra polyptera Schmarda, the name of which it is now proposed should be suppressed. The trivial name fennicum Levander, 1892, as published in the binominal combination *Pedalion fennicum* should then be placed upon the *Official List of Specific Trivial Names in Zoology*. Incidentally, it would be helpful if at the same time the International Commission were to place on this Official List the trivial names, each an available name and the oldest name for the species concerned, of two other well-known species of this genus. These trivial names are: (1) the trivial name mira Hudson, 1871 (Mon. microscop. J. 6:121), as published in the binominal combination Pedalion mira; (2) the trivial name intermedia Wiszniewski, 1929 (Bull. Acad. pol. Sci. Lettr. (Cl Sci. math. nat.) (B) 1929 (2):137)), as published in the binominal combination Pedalia intermedia.

- 16. The specific proposals which I now therefore lay before the International Commission on Zoological Nomenclature are that it should:—
 - (1) use its Plenary Powers :---
 - (a) to suppress, for the purposes of the Law of Priority but not for those of the Law of Homonymy the trivial name polyptera Schmarda, 1854, as published in the binominal combination Hexarthra polyptera;
 - (b) to set aside the indication, by monotypy, of *Hexarthra* polyptera Schmarda, 1854, as the type species of the genus *Hexarthra* Schmarda, 1854, and having done so, designate *Pedalion fennicum* Levander, 1892, to be the type species of that genus;
 - (2) place the generic name Hexarthra Schmarda, 1854 (type species, by designation, as proposed in (1) (b) above, under the Plenary Powers: Pedalion fennicum Levander, 1892) (gender of generic name: feminine) on the Official List of Generic Names in Zoology;

- (3) place the under-mentioned generic names or reputed generic names on the Official Index of Rejected and Invalid Generic Names in Zoology:—
 - (a) Pedalia Barrois, 1878 (a reputed but non-existent name);
 - (b) *Pedalion* Swainson, 1838 (a junior homonym of *Pedalion* Dillwyn, 1817);
 - (c) Pedalion Hudson, 1871 (a junior homonym of Pedalion Dillwyn, 1817);
 - (d) Pedalion Buckton, 1903 (Monogr. Membr. No. 6: 251) (a junior homonym of Pedalion Dillwyn, 1817);
- (4) place the under-mentioned trivial names on the Official List of Specific Trivial Names in Zoology:—
 - (a) fennicum Levander, 1892, as published in the binominal combination Pedalion fennicum (trivial name of species proposed, under (1)(b) above, to be designated as the type species of Hexarthra Schmarda, 1854);
 - (b) intermedia Wiszniewski, 1929, as published in the binominal combination *Pedalia intermedia*;
 - (c) *mira* Hudson, 1871, as published in the binominal combination *Pedalion mira*;
- (5) place the trivial name polyptera Schmarda, 1854, as published in the binominal combination Hexarthra polyptera (a name proposed, under (1)(a) above, to be suppressed under the Plenary Powers) on the Official Index of Rejected and Invalid Specific Trivial Names in Zoology.

II.—THE SUBSEQUENT HISTORY OF THE CASE

2. Registration of the present application: On the receipt of Dr. Neal's preliminary communication in April 1948, the problem of the name to be accepted for the genus formerly known either as *Pedalion* Hudson, 1871, or as *Pedalia* Barrois, 1878, was allotted the Registered Number Z.N.(S.) 340.

- 3. Submission of a revised application in 1951: The examination of the issues involved in the present case had not reached a stage at which it would have been possible to submit it to the Commission at its Session held in Paris in July 1948. Thereafter for some eighteen months the whole resources of the Commission were devoted to the preparation and publication of the Official Records of the Paris Meetings and it was not until the publication in 1950 of volumes 3, 4, and 5 of the Bulletin of Zoological Nomenclature (the volumes devoted to the foregoing Records) that it was possible to resume preparations for the publication in the Bulletin of applications relating to individual names submitted for decision. Discussions in regard to the present case between the Secretary and Dr. Neal began in November 1950 and were completed on 27th April 1951, when the present formal application was submitted to the Commission. This application covered all the matters dealt with in the original communication of April 1948, together with certain others, notably the proposed addition of names to the Official Lists and Official Indexes in conformity with the General Directive given to the Commission on this subject by the Thirteenth International Congress of Zoology, Paris 1948.
- **4.** Publication of the present application: The present application was sent to the printer in May 1951 and was published on 28th September of that year in Part 3 of volume 6 of the *Bulletin of Zoological Nomenclature* (Neal, 1951, *Bull. zool. Nomencl.* **6:** 73—78).
- 5. Issue of Public Notices: Under the revised arrangements prescribed by the Thirteenth International Congress of Zoology, Paris, 1948 (1950, Bull. zool. Nomencl. 4:50—56), Public Notice of the possible use by the International Commission on Zoological Nomenclature of its Plenary Powers in the present case was given on 28th September 1951, both in Part 3 of volume 6 of the Bulletin of Zoological Nomenclature (the Part in which Dr. Neal's application was published) and also to the other prescribed serial publications. The publication of these Notices elicited no objection to the action proposed in this case.

III.—THE DECISION OF THE INTERNATIONAL COMMISSION ON ZOOLOGICAL NOMENCLATURE

- 6. Issue of Voting Paper V.P.(52)50: On 15th May 1952, a Voting Paper (V.P.(52)50) was issued in which the Members of the Commission were invited to vote either for, or against, the proposal "relating to the name *Pedalion* Hudson, 1871, and associated names as set out in Points (1) to (5) in paragraph 16 on page 78 of volume 6 of the *Bulletin of Zoological Nomenclature*" [i.e. in paragraph 16 of the application reproduced in the first paragraph of the present *Opinion*].
- 7. The Prescribed Voting Period: As the foregoing Voting Paper was issued under the Three-Month Rule, the Prescribed Voting Period closed on 15th August 1952.
- 8. Particulars of the Voting on Voting Paper V.P.(52)50: The state of the voting on Voting Paper V.P.(52)50 at the close of the Prescribed Voting Period was as follows:—
 - (a) Affirmative Votes had been given by the following sixteen (16) Commissioners (arranged in the order in which Votes were received):

Riley; Hering; Calman; Dymond; Hankó; Bonnet; Vokes; do Amaral; Pearson¹; Bradley; Hemming; Esaki; Lemche; Cabrera; Stoll; Boschma;

(b) Negative Votes:

None;

Commissioner Pearson exercised in this case the right conferred by the Thirteenth International Congress of Zoology, Paris, 1948, under which a Commissioner may, if he so desires, signify his willingness to support the view, or the majority view, of other members of the Commission (1950, Bull. zool. Nomencl. 4:50—51).

(c) Voting Papers not returned, two (2):

Jaczewski; Mertens.

- 9. Declaration of Result of Vote: On 16th August 1952, Mr. Hemming, Secretary to the International Commission, acting as Returning Officer for the Vote taken on Voting Paper V.P.(52)50, signed a Certificate that the Votes cast were as set out in paragraph 8 above and declaring that the proposal submitted in the foregoing Voting Paper had been duly adopted and that the decision so taken was the decision of the International Commission in the matter aforesaid.
- 10. On 9th May 1954 Mr. Hemming prepared the Ruling given in the present *Opinion* and at the same time signed a Certificate that the terms of that Ruling were in complete accord with those of the proposal approved by the International Commission in its Vote on Voting Paper V.P.(52)50.
- 11. The following are the original references for the names placed on the Official Lists and Official Indexes by the Ruling given in the present Opinion:—

fennicum, Pedalion, Levander, 1892, Zool. Anz. 15:403

12. The application dealt with in the present *Opinion* was published in the *Bulletin of Zoological Nomenclature* prior to the establishment of the *Official List of Family-Group Names in Zoology* by the Fourteenth International Congress of Zoology,

Copenhagen, 1953. It has not been possible since then to deal with this aspect of the present case. This question is, however, now being examined on a separate File to which the Registered Number Z.N.(G.) 75 has been allotted.

- 13. At the time of the adoption of the Ruling given in the present *Opinion*, the expression prescribed for the second portion of the binomen which constitutes the scientific name of a species was the expression "trivial name" and the *Official List* reserved for recording such names was styled the *Official List of Specific Trivial Names in Zoology*, the word "trivial" appearing also in the title of the *Official Index* reserved for recording rejected and invalid names of this category. Under a decision taken by the Fourteenth International Congress of Zoology, Copenhagen, 1953, the expression "specific name" was substituted for the expression "trivial name" and corresponding changes were made in the titles of the *Official List* and *Official Index* of such names (1953, *Copenhagen Decisions zool. Nomencl.*: 21). The changes in terminology so adopted have been incorporated in the Ruling given in the present *Opinion*.
- 14. The prescribed procedures were duly complied with by the International Commission on Zoological Nomenclature in dealing with the present case, and the present *Opinion* is accordingly hereby rendered in the name of the said International Commission by the under-signed Francis Hemming, Secretary to the International Commission on Zoological Nomenclature, in virtue of all and every the powers conferred upon him in that behalf.
- 15. The present *Opinion* shall be known as *Opinion* Three Hundred and Twenty-Six (326) of the International Commission on Zoological Nomenclature.

DONE in London, this Ninth day of May, Nineteen Hundred and Fifty-Four.

Secretary to the International Commission on Zoological Nomenclature

FRANCIS HEMMING
